CAMEO™ Otic Ointment for ear health of dogs

PRODUCT INFORMATION

COMPONENTS:

Colloidal Silicon Dioxide, Isopropyl Myristate, Lanolin, Mineral Oil, Vitamin E, White Petrolatum, and a Proprietary Blend Comprised of Cassia Bark, Clove Bud, Eucalyptus, Origanum and Fragrance.

INDICATIONS:

For Otic use in dogs.

As an aid in the management of ear health in dogs. For control of malodorous (foul-smelling) discharge, exudate from an ear infection, particularly associated with bacterial or yeast infection of the ear.

DIRECTIONS FOR USE:

Clean and dry the ear, removing any foreign material or exudate, with a non-irritating solution where necessary.

Clip hair from the ear and surrounds to facilitate ear treatment.

Directions for opening the tube seal and applying the ointment into the ear are included on the inside flap of the product carton. Cameo Otic Ointment is a viscous ointment at room temperature. It becomes less viscous and fluid at body temperature, as it is applied to the ear canal, and easily coats the surface of the ear canal.

Fill the ear canal with the contents of the tube. Massage the ear canal, and from base of the ear, for distribution of the ointment in the ear canal. Wipe any excess ointment from the ear.

Apply once-a-week, every five (5) to seven (7) days as required. For dogs with chronic ear problems regular treatment will be required to manage the ear issue.

PRECAUTIONS:

Do not use if the tympanic membrane is perforated.

PRESENTATION:

A box containing eight (8) x 2.5g single-use tubes of Cameo Otic Ointment.

Store in cool place.

DISPOSAL:

Dispose of carton and plastic by recycling, place tubes in the garbage.
